KRISHI BHOOMI SCORE

592

● WATCH · 500-649

300 SCALE 300-950 950

Weighted from 4 sub-indices across an 8-week canopy window. Confidence gate applied for cloud-free coverage.

EXECUTIVE SUMMARY

Ramesh Patil's four parcels near Kengaon (Baramati, MH) resolve to an aggregate KBS of **592** · **Watch**. Landuse and stability sub-indices are within band norms, but the vigour and yield-potential channel trails the district median for the current growth stage, driven by a 12-day August dry spell. Government-scheme presence is strong (PM-KISAN and crop insurance both active). Committee should treat this as a defer-30-days recommendation and re-run after the next NDVI observation window.

SCORE CONTRIBUTION • SUB-INDICES

REASON CODES • 5

▼	VIGOR_WEAK	NDVI trajectory trails district median for this stage.
●	WEATHER_STRESS	12-day dry spell in August — irrigation gap detected.
●	STABILITY_OK	Coefficient of variation 0.22 across 3-year window.
▲	LANDUSE_STEADY	Landuse steady across last 3 seasons — no crop switch.
▲	BENEFITS_ACTIVE	Govt schemes active: PM-KISAN and crop insurance.

SUGGESTED ACTION • DEFER-30-DAYS

POLICY • CREDIT • v2.4

Defer disbursement 30 days & re-run after next observation window.

One sub-index (vigour and yield potential, 45) is below the committee threshold of 55, driven by an August dry spell. Recommend a field soil-moisture check on **MH-02/109** and **MH-02/111**. Re-assessment on 11 Oct 2025 will pick up two more Sentinel-2 revisits and one Sentinel-1 SAR pass; expected score band lift is Standard if canopy recovery holds.

METHODOLOGY & CONFIDENCE	
The Krishi Bhoomi Score reconstructs eight seasons of canopy, water and yield behaviour for each parcel using Sentinel-2 L2A optical imagery, Sentinel-1 C-SAR backscatter and IMD district weather. Four sub-indices are combined with committee-tunable weights, then multiplied by a confidence gate reflecting cloud-free observation density over the assessment window. This is an agronomic risk index, not a probability of default or a loan amount. Weights are provisional and subject to committee review each quarter.	Modelindex_v5.2 • deployed 12 Jun 2025
